Democracy Dies in Darkness

A summerlike heat wave will hit the East this week, worsening drought

High temperature records are forecast to be neared, tied or broken in nearly 600 locations from the Plains to Northeast, worsening droughts in some spots

April 13, 2026

An early heat wave is headed for parts of the East this week, making it feel more like summer.

Temperatures will rise into the 90s across the Mid-Atlantic and Southeast, with 80-degree heat stretching from the Midwest to New England — exceeding June averages for around 160 million people.

Celsius vs. Fahrenheit

Celsius is the global standard, whilst Fahrenheit is used primarily in the USA. The main difference between Celsius (°C) and Fahrenheit (°F) lies in their zero points and their scales: 0°C (freezing point) corresponds to 32°F, whilst 100°C (boiling point) corresponds to 212°F.

A degree Fahrenheit is smaller; a temperature change of 1°C equals 1.8°F

To convert from Celsius to Fahrenheit, use the formula $^{\circ}\text{F} = (^{\circ}\text{C} \times 9/5) + 32$.
Conversely, to convert from Fahrenheit to Celsius, use the formula $^{\circ}\text{C} = (^{\circ}\text{F} - 32) \times 5/9$.

$$-10^{\circ}\text{C} = 14^{\circ}\text{F}$$

$$-5^{\circ}\text{C} = 23^{\circ}\text{F}$$

$$0^{\circ}\text{C} = 32^{\circ}\text{F}$$

$$10^{\circ}\text{C} = 50^{\circ}\text{F}$$

$$15^{\circ}\text{C} = 59^{\circ}\text{F}$$

$$20^{\circ}\text{C} = 68^{\circ}\text{F}$$

$$25^{\circ}\text{C} = 77^{\circ}\text{F}$$

$$30^{\circ}\text{C} = 86^{\circ}\text{F}$$

$$35^{\circ}\text{C} = 95^{\circ}\text{F}$$
